Section 2: Selecting An Animal
Lessons included the *Selecting An Animal* section of the eLearning tool:

Lesson 1: Animal History .............................................................................................................. 12
Lesson 2: Anatomy ........................................................................................................................ 15
Lesson 3: Frame Score .................................................................................................................... 17
Lesson 4: Estimating Finish Weight ............................................................................................. 19
Lesson 5: Grading System ............................................................................................................. 22
Lesson 6: Cuts of Meat .................................................................................................................. 24
Lesson 7: Beef Breeds ................................................................................................................... 26

**Key Takeaway:**

Considerations for selecting animals to be a part of a herd must be aligned with the producer’s operation, as well as their overarching production and profit goals. The animal’s history and potential for cattle or beef production should be top of mind when selecting an animal.

By completing the *Selecting An Animal* section of the eLearning tool, members will be able to:

- Work through the assessment of an animal’s history using a checklist.
- Locate the parts of a beef animal’s anatomy on a diagram.
- Measure an animal’s hip height and determine the animal’s frame score, finished weight and the average daily gain needed to achieve finished weight.
- Give an overview of the beef grading system in Canada and list what characteristics differentiate the quality grades.
- Label a diagram of a beef animal’s carcass with the different cuts of meat.
- Reflect on what breed traits would be most important to them and their production and profit goals.

Assessing an Animal’s History

An animal’s history and previous management will affect how the animal will grow, develop and generally maintain its overall health in the future. When building a comprehensive history of an animal, producers consider the following:

- **Date of Birth/Age Verification.** Ask for an age verification certificate and make sure the certificate matches the tag number.

- **Weaning.** Ask when the animal was weaned and what it weighed at weaning.

- **Breeding Considerations.** Will the animal’s dominant breed traits will help to meet your cattle and beef production goals. If you’re considering a purebred animal, ask to see a copy of the registration papers.

- **Castration.** For a steer, determine when it was castrated and what method was used. Be sure to check that its castration was done properly and is in fact complete.

- **Horns.** Check to see if the animal is horned, dehorned or polled. If the animal is not polled, ask when it was dehorned and what method was used. Inspect the head for any regrowth. If there is regrowth, will the process need to be repeated?

- **Health.** Observe to see if the animal is it alert and active. Does it have a good appetite? Is the hair coat smooth and shiny? Does the animal have bright, clear, eyes? Are the ears upright, not drooping? Does the animal drink the water provided? Is the manure and urine normal for its age? Is there evidence of disease or parasites? Is the animal too fat or too thin? What is the current weight of the animal?

- **Vaccinations and de-worming.** Ask for a record of both.

- **Disposition.** Is it calm and comfortable around people and other animals or does it seem agitated? What is it’s positioning in a corral?

- **Implants.** Ask if the animal received any growth implants. If so, with what product and when?
## Checklist

**Assessing an Animal’s History**

<table>
<thead>
<tr>
<th>Date of Birth (DOB) / Age Verification</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Does the animal meet the age requirements for the project? Refer to the 4-H Alberta Beef Project Policy #6.05 for specific age requirements for projects.</td>
</tr>
<tr>
<td>- Have you seen the age verification certificate?</td>
</tr>
<tr>
<td>- Does the certificate match the tag number?</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Weaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>- What was the weaning date?</td>
</tr>
<tr>
<td>- What was the weaning weight?</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Breeding Considerations</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Is the animal a purebred or crossbred?</td>
</tr>
<tr>
<td>- If crossbred,</td>
</tr>
<tr>
<td>- What are the major breed influences?</td>
</tr>
<tr>
<td>- Will this cross’s traits help meet your project goals?</td>
</tr>
<tr>
<td>- If purebred,</td>
</tr>
<tr>
<td>- Will the breed’s traits help meet your project goals?</td>
</tr>
<tr>
<td>- Are there registration papers for the animal?</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Castration</th>
</tr>
</thead>
<tbody>
<tr>
<td>- If selecting a steer, when was it castrated?</td>
</tr>
<tr>
<td>- What method was used to castrate?</td>
</tr>
<tr>
<td>- Is there evidence that castration was incomplete?</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Horns</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Is the animal horned, dehorned or polled?</td>
</tr>
<tr>
<td>- When was the animal dehorned?</td>
</tr>
<tr>
<td>- What method was used to dehorn the beef project animal?</td>
</tr>
<tr>
<td>- Is there any regrowth, and if so, will the process have to be done again? Check the 4-H Alberta Beef Project Policy 6.05 for further guidelines.</td>
</tr>
</tbody>
</table>
### Health
- Does the animal look healthy?
  - Is the animal alert?
  - Does it have a good appetite?
  - Is the animal active?
  - Is the hair coat smooth and shiny?
  - Does the animal have bright, clear, eyes?
  - Are the ears upright, not drooping?
  - Does the animal drink the water provided?
  - Is the manure and urine normal for the age of the animal?
  - Is there evidence of disease or parasites?
  - Is the animal either too fat or too thin?
  - What is the current weight of the animal?

### Vaccination & Deworming
- Did you ask for a record of vaccinations and deworming?

### Disposition
- What is the beef project animal’s disposition?
- How does the animal behave?
- Is the animal calm and comfortable around people and other animals?
  - Some things to look for and avoid are:
    - Eyes - wild, fiery, scared
    - Legs - fidgety, pawing, kicks
    - Stance - charging, shaking, cowering
  - Positioning in the corral – if the animal stays far away from you at all times, stay far away from it as a project.

### Implants
- Has the animal received a growth implant?
  - If so, with what product?
  - When was it implanted?
Instructions: Correctly match the parts of the animal to their location on the diagram.

_____ Poll
_____ Tail Head
_____ Pin Bone
_____ Crest
_____ Quarter
_____ Shoulder
_____ Shank
_____ Knee
_____ Heart Girth
_____ Hock

_____ Chest Floor
_____ Ribs
_____ Underline
_____ Point of the Shoulder
_____ Crop
_____ Back
_____ Dewlap
_____ Flank
_____ Hooks
_____ Forearm

_____ Dew Claw
_____ Topline
_____ Brisket
_____ Pastern
_____ Ear
_____ Stifle Region
_____ Muzzle
_____ Loin
_____ Rump
_____ Face
Frame score is determined by the age and the hip height of the animal. With the frame score, the producer can better determine how best to feed the animal in the time that they have. The higher the frame score, the longer it will take to finish the animal or the larger it will be as a mature cow or bull.

*Measuring Hip Height*

Ensuring that the animal is standing on a level surface, in inches, measure to the point directly over the hip bones.

</tbody>
</table>

**Example:** A steer born on February 1st with a hip height measurement of 49.3 inches on October 1st will have a Frame Score of 7.
Frame Score is used to estimate the finished or mature weight at which the animal will be ready for market or breeding. After producers determine the frame score, they use this chart to estimate the finished weight:

<table>
<thead>
<tr>
<th>Frame Score</th>
<th>Finished Weight (estimated in pounds)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>850</td>
</tr>
<tr>
<td>3</td>
<td>950</td>
</tr>
<tr>
<td>4</td>
<td>1050</td>
</tr>
<tr>
<td>5</td>
<td>1150</td>
</tr>
<tr>
<td>6</td>
<td>1250</td>
</tr>
<tr>
<td>7</td>
<td>1350</td>
</tr>
<tr>
<td>8</td>
<td>1450</td>
</tr>
<tr>
<td>9</td>
<td>1550</td>
</tr>
</tbody>
</table>

Example: A steer with a Frame Score of 6 would have an estimated finished weight of be 1250 pounds.
Reference Sheet

Average Daily Gain

Once producers know the estimated finished weight of an animal, they can calculate the Average Daily Gain they need to achieve in order to reach a desired finished weight at the time they’d like to market or breed the animal.

**Step 1**

\[
\begin{align*}
\text{Target Weight} & \quad 1250 \\
\text{Current Weight} & \quad - \quad 650 \\
\text{Weight to Gain} & \quad = \quad 600
\end{align*}
\]

Target Weight or Estimated Finished Weight (pounds)
- Current Weight or Weight at Weigh-In Day (pounds)

Weight to Gain or Pounds needed to gain to reach Target Weight (pounds)

**Step 2**

\[
\begin{align*}
5.5 \text{ months} \times 30 \text{ days} & = 165 \text{ Days}
\end{align*}
\]

Months Until Desired Sale or Breeding Date
\times
30 (days)

Number of Days Until Desired Sale or Breeding Date

**Step 3**

\[
\begin{align*}
\text{Weight to Gain} & \quad 600 \\
\text{Number of Days} & \quad \div \quad 165 \\
\text{Average Daily Gain} & \quad = \quad 3.64 \text{ pounds/day}
\end{align*}
\]

Weight to Gain
\div
Number of Days Until Desired Sale or Breeding Date

Average Daily Gain

Determining Frame Score, Finished Weight & Average Daily Gain

Instructions: Work through the following process to determine the average daily gain needed to achieve a desired finished weight for your project animal.

**Frame Score**

Your steer calf or heifer calf’s age in months: a. _____________

Current hip height of your steer calf or heifer calf in inches: b. _____________

Referring to the appropriate Frame Score Chart, use the age in months (a.) and the hip height in inches (b.), to determine the frame score of your steer calf or heifer calf: c. _____________

**Estimated Finished Weight**

Referring to the Estimated Finish Weight Chart, use the frame score (c.), to determine your steer calf or heifer calf’s approximate finished weight: d. _____________

**Average Daily Gain**

Estimated Finished Weight (d). _____________

Current Weight of your Steer Calf or Heifer Calf: e. _____________

Weight to Gain f. _____________

Months Until Desired Sale or Breeding Date g. _____________

x h. _____________

30 (days in a month)

Days Until Desired Sale or Breeding Date i. _____________

Weight to Gain (f). _____________

÷ i. _____________

Days Until Desired Sale or Breeding Date (i). _____________

Average Daily Gain (j). _____________
Reference Sheet

Beef Grading In Canada

It is important for beef producers to understand the grading system because carcasses with top quality grades are sold at a premium, and the information collected from the grading process can be used to improve production and marketing techniques.

Grading gives customers a consistent way of selecting beef and therefore greater consistency and predictability in the eating quality of specific grades of beef. Beef grading is overseen by the Canadian Beef Grading Agency and is conducted by certified graders after a carcass has been inspected and approved for health and safety standards and bears a federal or provincial meat inspection legend or stamp.

The grader assesses a carcass based on several criteria influencing carcass quality and the lean yield.

Quality – Predicted tenderness, juiciness, customer acceptability and shelf life are assessed based on maturity (age), sex, conformation (muscling), fat (colour, texture and cover) and meat (colour, texture and marbling). The assessment of marbling is based on the average amount, size and distribution of fat particles or deposits in the rib eye.

Yield – Carcasses qualifying for Canada Prime or any of the Canada A grades are also assessed for an estimation of lean meat yield. This is done by graders using a yield ruler to determine the rib-eye size and fat class between the 12th and 13th ribs.

Each of the characteristics assessed while grading has an influence on quality.

- **Maturity.** Affects tenderness.
- **Sex.** Pronounced masculinity affects meat colour and palatability.
- **Muscling.** Meat yield is influenced by the degree of muscling.
- **Fat.** Colour and texture of fat influence consumer acceptability whereas fat cover affects yield.
- **Meat.** Marbling affects eating quality for juiciness and tenderness. Colour and texture influence consumer acceptability.

The grades that all feedlots feeding youthful cattle strive for is Canada A, Canada AA, Canada AAA and Canada Prime with a lean meat yield of around 60%.
This chart shows what characteristics are required for many of the quality grades.

<table>

Consumers are drawn to different cuts of meat for different uses. The values associated with each cut vary as a result.
Member Activity Sheet

cuts of Meat

Instructions: Match each cut of meat to the location on the carcass that it comes from.

1. Sirloin roast or steak, Ribeye steak
2. Heel of round
3. Chuck short rib
4. Plate
5. Stewing Beef (Shoulder)
6. Short ribs
7. Shank
8. Inside or outside round steak or roast, eye of round roast or steak
9. Shank
10. Brisket
11. T-bone Porterhouse Tenderloin Striploin Wing steak
12. Blade roast or Steak neck
13. Sirloin tip roast or steak
14. Flank steak
15. Neck
16. Rump roast
17. Sirloin steak
18. Cross rib
Reference Sheet

Selecting Beef Breeds

There are a lot of different breeds of beef in Alberta. Each breed has some important trait differences. For instance, some breeds have been bred with an emphasis on carcass and growth characteristics while some have been bred for their hardiness and maternal qualities.

Producers make decisions on breed or breeds based on what type of operation they’re running and the breed traits that are mostly likely to help them meet their production, marketing and profit goals.

It’s not unusual for a group of beef producers to end up in a friendly debate about the various breeds! Learn more at the various breed association websites.
